## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of group I in the reply filed on 8/28/2008 is acknowledged. The traversal is on the ground(s) that examination of all the groups would not constitute a serious burden. This is not found persuasive because the special technical features of the groups do not correspond, notwithstanding any bearing on a burden to the PTO.

The requirement is still deemed proper and is therefore made FINAL.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-t are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites other aliphatic diols. It is unclear whether applicant intends to cover the listed alcohols or all aliphatic diols.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S.

Patent No. 5,990,214 to Arendt et al. (Arendt).

In view of those embodiments covered by the rejected claims, Arendt teaches esters derived from glycols and benzoic or toluic acid, namely, DEGB or TEGB, see Example 1, for instance.

Those physical properties set forth in the rejected claims are invariably possessed by the compositions of Arendt, see MPEP 2112.01 ("Where the claimed and prior art products are identical or substantially identical in structure or composition, or are produced by identical or substantially identical processes, a *prima facie* case of either anticipation or obviousness has been established. *In re Best*, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). "When the PTO shows a sound basis for believing that the products of the applicant and the prior art are the same, the applicant has the burden of showing that they are not." *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990) . . . "[p]roducts of identical chemical composition can not have mutually exclusive properties." A chemical composition and its properties are inseparable. Therefore, if the prior art teaches the identical chemical structure, the properties applicant discloses and/or claims are necessarily present. *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990)").

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arendt in view of GB947764 (GB 764).

The rejected claims cover those embodiments wherein the claimed compositions further comprise tall oil fatty acids, which is not explicitly disclosed by Arendt. However, for this proposition, the examiner joins GB 764, which discloses that glycol benzoate plasticizer compositions commonly comprise fatty acids, such as soybean fatty acid derivatives, see attached CAS online citation 60:69197 [retrieved 2 September 2008] from STN; Columbus, OH, USA. Therefore, plasticizer compositions that comprise tall oil fatty acids are well within the purview of those of ordinary skill, and thus, prima facie obvious.
